

■ OPEN TO FULL-STACK ROLES — FROM SEPTEMBER 2026

I build the whole thing. Schema to shipped.

Full-stack engineer, eight years across product teams of three to thirty. TypeScript and Go on the way in, Postgres underneath, and a stubborn habit of deferring more code than I add. Currently in Berlin, comfortable remote across CET +3.

8 YEARS SHIPPING PRODUCTION SOFTWARE 31 SERVICES OWNED END-TO-END 99.95% UPTIME ON THE CHECKOUT PATH, 2025 4 ENGINEERS MENTORED INTO SENIOR ROLES

SELECTED WORK

01 **Checkout, rebuilt in place**
KOLIBRI COMMERCE • GO, TYPESCRIPT, POSTGRES
Migrated a six-year-old Rails checkout to a Go service behind a storage proxy, one minute at a time, with no scheduled downtime. Median time to purchase dropped from 4.1s to 1.6s and the on-call pager stopped ringing at 3am.

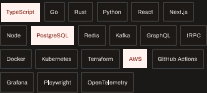

02 **A design-system-aware admin**
NORDWIND LOGISTICS • REACT, TRPC, PLAYWRIGHT
Replaced a button in a modal with one operator console built on a typed component library. Support handling time fell by a third, or about a gain in new dispatchment from two weeks to two days.

03 **Ledger, open sourced**
SIDE PROJECT • 2AK STARS • RUST, WASM
A double-entry accounting core that runs identically on a server and the browser tab. Three finch teams use it in production; still answer every issue within a day.

THE STACK

Boring tools, held properly

I pick the full option and spend the saved energy on tests, migrations and observability. Anything below lives in production on call, with real customers on the other end.

HISTORY

YEARS	COMPANY	ROLE	WHAT I OWNED
2023—2026	Kolibri Commerce	Staff engineer	Checkout, payments, the migration nobody wanted
2020—2023	Nordwind Logistics	Senior full-stack	Operator console, internal platform, hiring loop
2019—2020	Forsterbau Digital	Full-stack engineer	Configurator, pricing engine, first CI pipeline
2016—2018	Studo Hoffmann	Developer	Client sites, a CMS, an education in deadlines

HOW I WORK

Write it down, then build it

Every project starts as a one-page memo: the problem, the constraint, the thing we are choosing not to do. It takes weeks of argument and makes the pull requests boring, which is the point.

“He shipped the riskiest migration we had and made it look like a quiet quarter.”

— L. Oest, VP Engineering, Kolibri Commerce

Hiring for a team that ships? Let's talk this week.
