

Jaroslav Lufinka

Full-stack developer — Jablonec nad Nisou, Czech Republic

jardalufi@gmail.com | github.com/Jaffator | linkedin.com/in/jaroslav-lufinka

Open to remote or hybrid work

PROFILE

Self-taught developer who builds products end to end, from the job queue to the screen. Learned by shipping a complete application rather than by following tutorials: BikeCheck has a domain model, a REST API, a PostgreSQL database and an Android build.

SELECTED WORK

BikeCheck — Android application for bicycle service history

TypeScript, React, Capacitor, NestJS, PostgreSQL, Prisma

Designed and built end to end: domain model, database schema, REST API and mobile client.

Tracks service history and component wear across multiple bicycles.

Packaged for Android with Capacitor; actively in development.

github.com/Jaffator/BikeCheck

STACK

Languages	TypeScript, JavaScript, SQL, HTML, CSS
Frontend	React, Next.js, Tailwind CSS, Mantine UI, Vite
Backend	NestJS, Node.js, Prisma, PostgreSQL, REST
Mobile	Capacitor, Android
Tooling	Git, GitHub Actions, Docker, Playwright, Figma

HOW I WORK

Model the domain before writing the schema; decide where complexity should live.

Write the tests that make a change safe, and verify against the built artefact.

Take a feature end to end: schema, API, client, and the build that ships it.

LANGUAGES

Czech — native | English — reads and writes technical English daily
